

LOS ANGELES AREA FREEWAY SYSTEM

This map is designed as an aid in planning freeway trips in the metropolitan area. Freeway driving can be a bewildering experience to the unprepared, but you can enhance your convenience, comfort and safety by selecting freeway routes in advance. Connections to the surface-street system are indicated, but a more detailed map showing all streets should be used to locate specific points of interest.

Automobile Club of Southern California members (AAA) needing emergency road service will find help as near as the closest freeway call box: simply identify yourself as a Club member, and you will be directly connected to an Automobile Club of Southern California dispatching office. Where call boxes are not provided and you can safely get out of your car, raise the hood and wait for a patrolman. He will relay your request for service to the Club.
